

# **CHAPTER II**

## **SECTION 3 FIGURES**

Comparison of Actual Total and Tri+ PCB Mass Removed to Design and Adjusted Estimates, by CU

Notes: Boxplots of total PCB comparing residual and SSAP cores with centroids within the first six inch interval below the design elevation in Phase-I dredging units, upper Hudson River, NY. Red lines represent the median concentration, the boxes represent the 25<sup>th</sup> and 75<sup>th</sup> percentiles and the “whiskers” are the lesser of 1.5 times the box length (inter-quartile range) and the maximum PCB value. Median PCB concentration in SSAP cores was lower than in Residual cores in all 10 certification units.
