CHAPTER II

SECTION 2 FIGURES
Dredging Volume Increase (Actual over Design Estimate)

EPA Phase 1 Evaluation Report – Hudson River PCBs Site

March 2010
Percentage of Level 1A and Level 1A & 2A SSAP Cores

Figure II-2.3-1

EPA Phase 1 Evaluation Report – Hudson River PCBs Site

March 2010
Comparison of SSAP Core Completeness, Dredging Volume Increase (Actual over Design) and Additional Dredging Depth

EPA Phase 1 Evaluation Report – Hudson River PCBs Site

Figure II-2-4-1

March 2010
Note: The vertical axis intercept represents the variance of samples from the same locations and the square root of the nugget representing random variation is estimated to be approximately 8 to 10 inches.
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.

Comparison of the 2009 and 2005 Pre-Dredge Bathymetry
Hudson River PCBs Site - EPA Phase 1 Evaluation Report

March 2010
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.

Legend
- Edge of Rip-Rap
- 5ft - Interface Offset
- Navigation Channel
- Clay Extent
- Shoreline (20081222)
- Revised Certification Units
- Rock/Bucket Refusal Limit

Comparison of the 2009 and 2005 Pre-Dredge Bathymetry

Hudson River PCBs Site - EPA Phase 1 Evaluation Report
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.

Comparison of the 2009 and 2005 Pre-Dredge Bathymetry
Hudson River PCBs Site - EPA Phase 1 Evaluation Report

Figure II-2.6e
March 2010
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.

Comparison of the 2009 and 2005 Pre-Dredge Bathymetry

Hudson River PCBs Site - EPA Phase 1 Evaluation Report

March 2010
Difference in the pre-dredge bathymetry is calculated by subtracting the 2005 pre-dredge bathymetry from the 2009 pre-dredge bathymetry. Positive values indicate deposition while negative values indicate erosion.
